

The Great Green Wall Initiative

Objective: to fight against land degradation and its consequences south of the Sahara

What does it involve?

The Great Green Wall is an African ecological restoration initiative that aims to improve food security in Africa.

2007

Launch of the initiative

2021

The project gains new momentum after the One Planet Summit

International contributors renew their financial commitment and the Great Green Wall Accelerator is created.

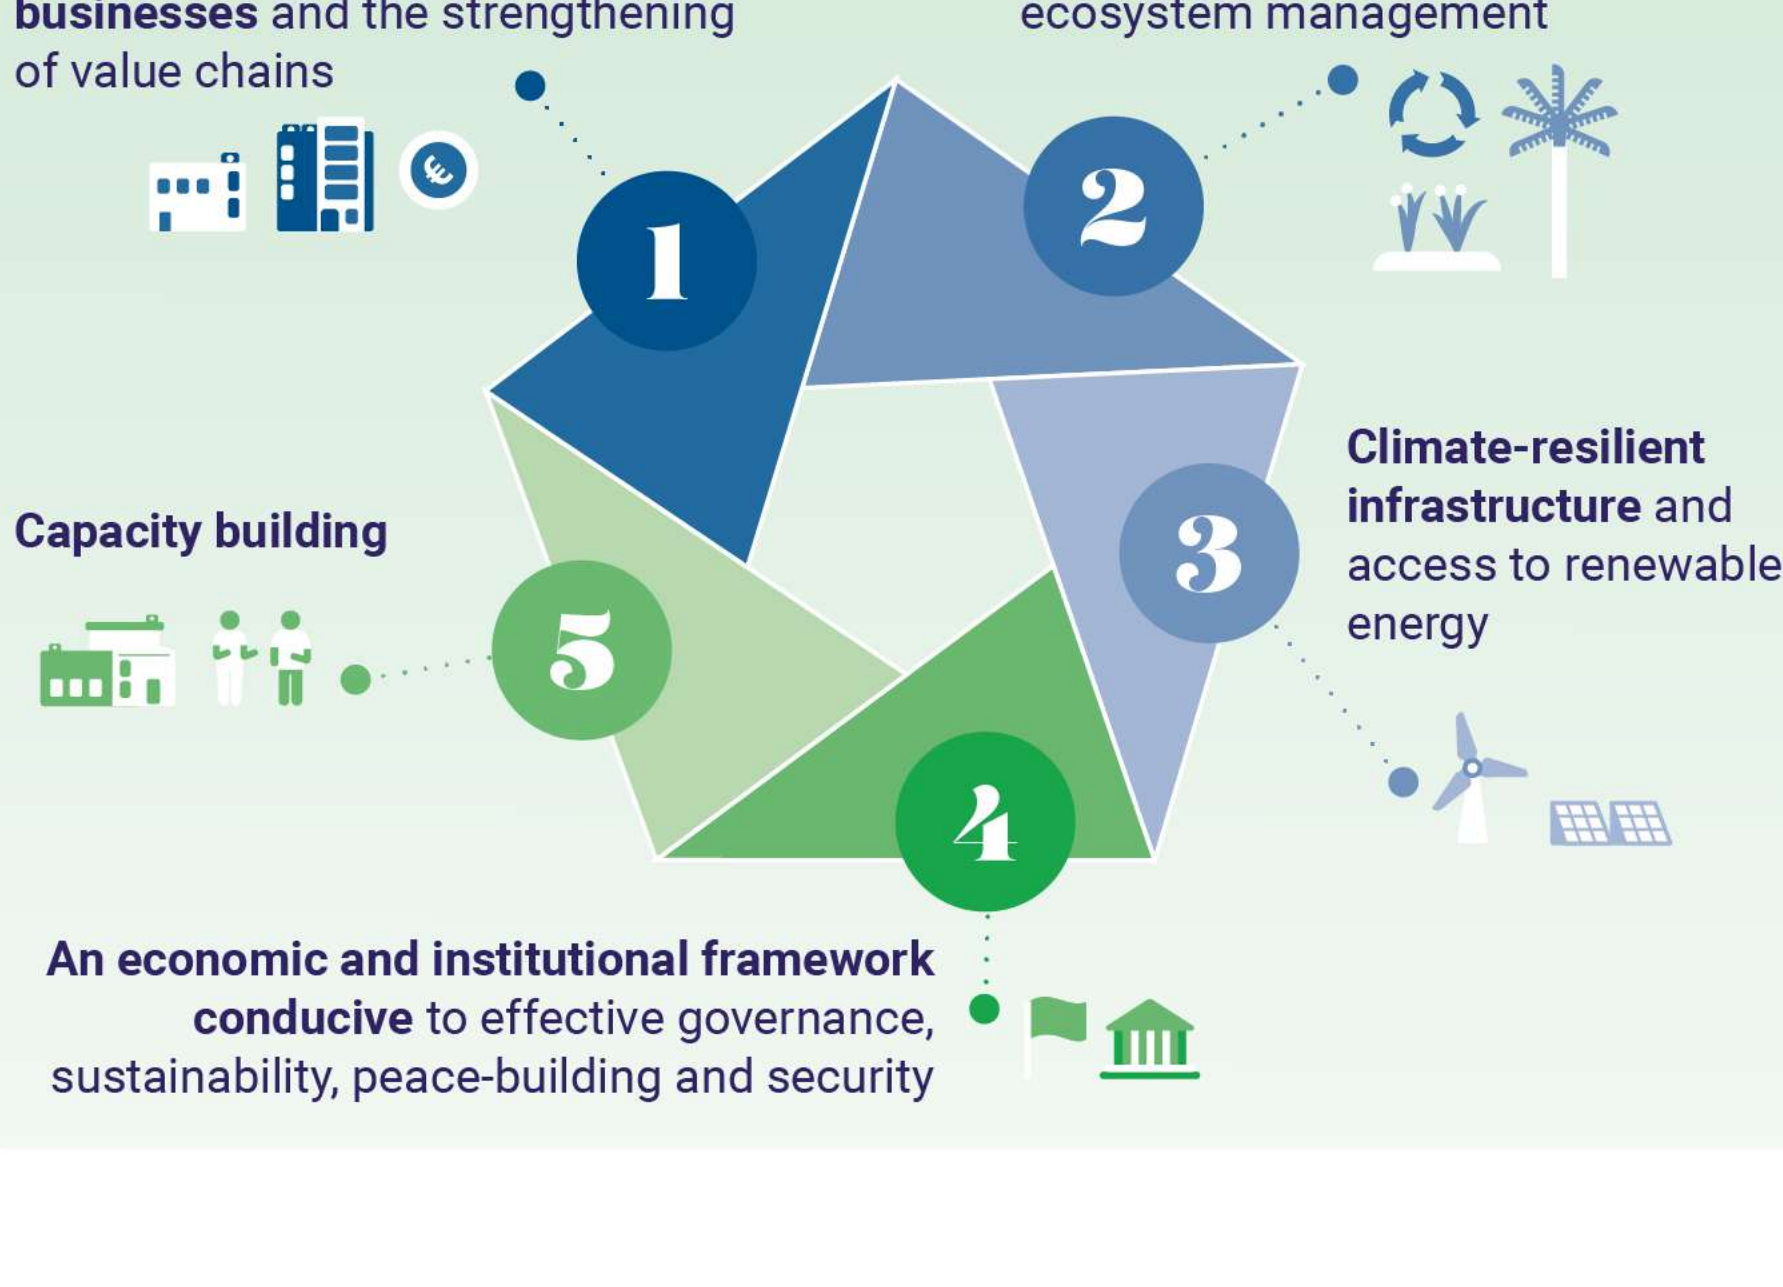

€600M in commitments made by AFD 2021-2025 **11 countries** concerned **8,000 km**

Objectives to be achieved by 2030

100 million hectares of degraded land to be restored
10 million jobs to be created in rural areas
250 million tons of CO₂ to be sequestered in vegetation

To achieve these goals, the initiative's relaunch will rely on **five key pillars**

Why choose this initiative?

This region is facing many challenges, including poverty, land degradation caused by human activity and climate change, a loss of biodiversity, the lack of decent rural jobs, and conflict over access to natural resources.

30% of arable land is currently in an advanced state of degradation

3°C temperature increase predicted by 2050

42 million people are likely to experience serious food shortages between June and August 2023

Focus on three countries in the heart of the Great Green Wall region

Mauritania

€28.5 million in grants

#FoodSecurity #FARM

In Mauritania, AFD is supporting the **ASARIGG** projects led by the **Mauritanian government** and **NGOs: GRET, Grdr and Tenmiya.**

Actions

- 200,000 hectares of arable land in the Senegal River valley developed for rain-fed agriculture
- Higher incomes for the most vulnerable producers and households through access to irrigation, restoration of degraded land and promotion of agro-ecological practices

In the Gorgol and Guidimakha regions

Construct watersheds
Carry out extension works for hydro-agricultural facilities
Provide technical and management advice to producer organizations

Results

440 hectares of land restored for food crops in dry areas

350 additional hectares by the end of 2023

Chad

€3 million in grants

#PlantProteins #Peace

In Chad, the AFD Minka Peace and Resilience Fund is supporting development in agricultural sectors. This project is being implemented by a consortium led by **CCFD-Terre Solidaire.**

Actions

- Improve food security for the long term
- Support the plant protein sectors (groundnuts, black-eyed peas and spirulina)
- Prevent conflicts due to competition for access to natural resources in the Lake Chad, Hadjer-Lamis and Chari Baguirmi provinces

Objectives

Strengthen local governance through the collaborative, peaceful and sustainable management of agroforestry resources

Improve the practices, productivity and food security of family farms while maintaining the ecological balance of ecosystems

Support key players in the plant protein sectors

Promote the sharing of best practices using monitoring and evaluation systems

Ethiopia

€5 million in grants

#FamilyFarming #SoilFertility

AFD is working on a project in Ethiopia that aims to support family farming in mountainous areas. The project involves constructing 40 watersheds in the south of the country, at an altitude of over 1,900 m.

Background

The agricultural sector is facing a number of threats: population growth, deforestation, overgrazing and the loss of farmland

Actions

- It is estimated that 40,000 family farms will see an increase in their production capacity and income
- 36,000 people will have access to a high quality supply of drinking water
- 2,600 hectares of land will benefit from sustainable resource and land management programs, including their conversion to agro-ecological systems

Objectives

Improve soil fertility

Reduce the erosion of farmland

Guarantee better access to water

Diversify animal and plant production
